855 Sherbrooke St W, Montreal, Quebec H3A 2T7
(438) · 501 · 1496 ◇ yookyung.julia.koh@mail.mcgill.ca

EDUCATION

McGill University

Ph.D. Candidate in Economics (GPA: 3.78/4.0)
Supervisor: Silvia Gonçalves

2018 - present

Ewha Womans University

M.A. in Economics (GPA: 3.97/4.0)

2016 - 2018

Ewha Womans University

B.A. in Economics (GPA: 3.36/4.0)

2011 - 2016

RESEARCH INTERESTS

Time-Series Analysis, Bootstrap, Factor Models

TEACHING EXPERIENCE

McGill University - Lecturer

Economic Statistics
Mathematics for Economists (Graduate)
Econometrics 2 Honours

Winter, 2023
Summer, 2022
Winter, 2022

McGill University - Teaching Assistant

Macroeconomic Analysis & Application
Econometrics 1 Honours
Microeconomic Theory 1 (Graduate)
Macroeconomic Theory 1 (Graduate)
Applied Cross-Sectional Methods (Graduate)
Applied Time-Series & Forecast (Graduate)
Economic Statistics

Winter, 2023
Fall, 2022
Fall, 2021

WORKING PAPERS

- “Bootstrap inference for group factor models”, with Sílvia Gonçalves and Benoit Perron

Abstract: Recently, Andreou et al. (2019) have proposed a test for common factors based on canonical correlations between factors estimated separately from each group. We propose and theoretically justify a simple bootstrap test that avoids the need to estimate the bias and variance of the canonical correlations explicitly. We verify these conditions for a wild bootstrap scheme similar to the one proposed in Gonçalves and Perron (2014). Simulation experiments show that this bootstrap approach leads to rejection rates closer to the nominal level in all of our designs compared to the asymptotic framework.

- “Bootstrapping Factor-MIDAS Regression Models”

Abstract: This paper derives the asymptotic distribution of the factor-augmented MIDAS regression models under the assumption that $\sqrt{T}/N \rightarrow c$, $0 \leq c < \infty$, where T is the time series dimension and N is the cross-sectional dimension. When $c \neq 0$, we find that there exists an asymptotic bias term due to the two-step estimation procedure in the factor-MIDAS estimation. We propose a general residual-based bootstrap procedures for inference in this context. We illustrate the good finite sample properties of the bootstrap method in Monte Carlo simulation.

CONFERENCE AND SEMINAR PARTICIPATION

- 2023 Virtual Workshop for Junior Researchers in Time Series, April 20
CIREQ, McGill University, April 18
- 2022 International Symposium on Econometric Theory and Applications, July 20 - 21
Canadian Economic Association, May 31 - June 4
CIREQ, McGill University, April 12

HONORS AND SCHOLARSHIPS

- 2018 - 2023 Graduate Excellence Award, McGill University

OTHER RESEARCH EXPERIENCE

Hosin Song, Ewha Womans University *March - December, 2017*
Project on Simulated Integrated Conditional Moment (SICM) estimation for the binary model: compare the performance of SICM, MSM (Method of Simulated Moments), and Probit models using simple binary model. Each performance is compared by MSE, coded in Matlab.

Vladimir Hlasny, Department of Economics, Ewha Womans University *September, 2016 - February, 2017*
Project on early development in middle east region: compare the concentration index and use STATA.

TECHNICAL STRENGTHS

Computer Languages	Matlab, Python
Statistical Tools	STATA, R

LANGUAGE

English (Fluent), Korean (Native), French (Intermediate)
